

# Wind Energy Project Development

**The development**, erection and operation of wind farms is an art in its own right. Governmental regulations and detailed permit requirements need to be taken into account.

As project developer, process manager and consultant, Grontmij has all required knowledge and expertise to develop a wind farm from start to finish.

**We provide** consultancy and manage the development process for developers as well as farm operators. Grontmij Climate & Energy is also participating in the development of a pipeline of on shore wind projects in The Netherlands.

# Renewable energy targets

**The government of The Netherlands wishes to establish energy production facilities in The Netherlands that are independent, reliable and renewable. For these reasons, the government has provided clear and ambitious renewable energy targets for the years to come. Grontmij is able to contribute to fulfilling these targets. We develop wind energy projects that contribute to a clean and stable economic future for our country.**

## Wind energy

Wind energy is not only a type of energy production that is sustainable. It is the answer to a number of significant environmental concerns. One of these concerns is climate change, as a result of greenhouse gas emissions. Grontmij is dedicated to contribute to clear environmental targets across several media and is well equipped to do so.

Our close contacts with relevant governmental organisations such as local municipalities and provinces enable us to develop locations that are embedded within local policies and requirements. Furthermore, we do not hesitate to share the benefits of a future wind farm with other stake holders.

## Grontmij

Grontmij is a reliable and skilful partner for developing wind energy projects in all parts of The Netherlands; a network of 35 offices assists us in maintaining a clear presence in most parts of the country. We are a project development organisation. Being a part of a consultancy company of over 7000 employees means that we have the knowledge and skills needed to develop a new location: from selection of potentially suitable sites to securing all relevant permits. In adopting this framework of operation, we do not seek to become involved in the operation of wind farms.

We develop wind energy projects for the investment market. The projects fit into the portfolio of fiscally driven investors and also of wind farm operating companies. Bottom line is a typical 12 megawatt wind farm in a coastal region of The Netherlands.

Currently we have a hold on positions for realising 50 megawatts of wind energy power capacity in The Netherlands. Since we are an ambitious organisation, we look for new opportunities. If you need a reliable partner, do not hesitate to contact us.

Grontmij, established in 1915, is a multidisciplinary consulting and engineering firm employing over 8,000 professionals active in the environmental, water, energy, building, industrial and transportation sectors. We aim to be the best local service provider in North-West Europe and provide added value throughout the entire process of design, consulting, engineering, contracting and managing multidisciplinary projects. We design and realise plans for the future by connecting people and parties within regions. Our basic principle is always to do this in a way that is respectful of the environment, our customers and each other. Grontmij is listed on the Euronext Amsterdam Stock Market.
